Tips for Completing a Speed Test

With more and more devices in the home using an internet connection and slowing down the speed, competing a speed test is becoming more and more common.

Best Practice for Completing a Speed Test

- **Run the speed test from a wired device that is capable of supporting the speed that you are testing**
- **Pick a geographic location close to you. The speed test server that is hosted by SMU, smunet.net, speedtestcustom.com will give you the most accurate results.**
- **If possible, do not run a speed test on a wireless device; there are many variables that can affect the results.**
- **Run the test when no other devices are using the Internet connection.**

Completing a speed test from a wireless device or with multiple devices running has too many variables that can affect the results. If you have questions on completing a test, or questions on the results, feel free to contact our customer service center at 580-5800.
